

INTEGRATING COMPLIANCE INTO AN ORGANISATION'S DNA

Organisations are no strangers to standards, but you are now in a position that the increasing number of standards, regulations and legislation makes continued compliance more complex and time consuming which may increase your organisation risks.

Depending on the industry sector, there are a plethora of standards such as : ISO 9001, OHSAS 18001 (ISO 45001), ISO 14001, ISO 31000, ISO 17020, ISO 17025, ISM Code, API Q1, API Q2, OIMS, SEMS, Sarbanes Oxley in addition to financial, manufacturing and employment legislation... the list goes on.

Factor in the continual review and upgrading of standards, and on-going compliance becomes unmanageable. Managing complex cross reference matrices per standard can be onerous

to maintain, however there is a better way of ensuring you have greater control of compliance and that your workforce are aware of their responsibilities.

Our system connects applications, systems and people, and uses the Compliance Navigator component within AgilityBMS in order to simplify the complexity of multi-standard compliance.

The result is higher levels of visibility and greater understanding of what is needed to maintain the organisation's governance over compliance.

With 300,000 users ranging from the UK Naval Bases, Centrica, Total E&P, Petrofac, Technip & Siemens, the system is powerful, proven, easy to use and importantly, it is cost effective.
