

PROCESSES ARE THE
ORGANISATIONAL DNA

Process based Business Management Systems

In today's highly competitive, regulatory environment, controlling Management System content has become increasingly complex. Volumes of procedures, each filed in order with poor links to associated systems such as Health & Safety, Environment and HR result in poor take up of the information resulting in increased risk of non-compliance.

QHSE ISO Management Systems, API Q1/Q2 including all other regulatory compliance can be maintained with business risk reduced through an approach that integrates these crucial elements within the business processes that drive all operations. By embedding repeatable best practice into your business processes, true optimisation can be achieved.

Our AgilityBMS Business Management System provides a framework to structure Policies, Processes and Procedures in a manner that increases visibility of individual responsibilities, and also details

the controls that provide assurance to maintain good practice, while ultimately supporting corporate governance.

BusinessPort can provide experienced Project Support staff that can assist with Process Management, Process Mapping and Training, as required.

Our SharePoint Services team consists of highly experienced, competent developers who can tailor solutions that maximise your employees' productivity, effectiveness and performance. We believe we can deliver exceptional value and reduce your costs.

With 300,000 users ranging from the UK Naval Bases, Centrica, Total E&P, Petrofac, Technip and Siemens, the system is powerful, proven, easy to use and importantly, it is cost effective to maintain.

We integrate Process, Risk and Compliance to form your organisations DNA.
